SUMMARY

Fullstack Developer with 5 years of production experience building web applications in logistics, enterprise automation and e-commerce — React, TypeScript, Vue and Nuxt on the frontend; Python, PHP, Node.js, Java, REST APIs, PostgreSQL/MySQL and Docker on the backend. Led the full React rewrite of Quantum ELD, a compliance platform used daily by fleet operators, and delivered CRM, WMS/TMS and admin systems on Vue 2/3 and Nuxt 3 with their APIs and databases. Comfortable owning a product end to end — database, API, architecture, state, design system, performance and release. Open-source contributor to Expensify/App.

EXPERIENCE

Frontend Developer — Longhorn Logistics Group

Oct 2024 – Jul 2026

Quantum ELD (formerly Green Light ELD) — Electronic Logging Device platform for fleet operations and FMCSA compliance.

- Led the migration of the legacy frontend to a modern **React + TypeScript + Vite** stack, replacing the previous build pipeline and cutting local dev rebuild times from minutes to seconds.
- Introduced **React Query** for server-state management and caching, replacing scattered manual fetch logic with a single caching layer and eliminating a recurring class of stale-data bugs.
- Rebuilt the UI layer with **Tailwind CSS and Radix UI**, establishing a shared, accessible design system that made new screens noticeably faster to build and kept the UI visually consistent.
- Improved runtime performance through route-level code-splitting, memoization and React DevTools render profiling, reducing the initial bundle and unnecessary re-renders on data-heavy screens.
- Translate ELD/FMCSA regulatory requirements into UI workflows, working directly with backend and compliance stakeholders.

Fullstack Developer — Zamonaviy Kommunikatsiyalar

Nov 2021 – Sep 2024

Systems-integration and enterprise-automation company.

- Delivered a portfolio of enterprise products — CRM platforms, WMS/TMS systems, admin panels and corporate sites — used daily by internal teams and client organizations.
- Built scalable frontends with **Vue 2, Vue 3, Nuxt 3 and Bootstrap-Vue**, owning feature work from specification through release.
- Developed backend modules and **REST APIs with Node.js and PHP** on **MySQL/PostgreSQL** — schema design, queries and business logic behind CRM and WMS/TMS features — and containerized services with **Docker**.
- Designed reusable component architectures and centralized state with **Vuex and Pinia**, which became the shared foundation across multiple long-running products.
- Maintained and refactored legacy Vue 2 codebases while incrementally migrating modules to Vue 3 Composition API.

Fullstack Developer (Remote, part-time) — Promuz

Mar 2024 – May 2024

Remote contract work carried out in parallel with the role above.

- Built e-commerce storefronts with **Nuxt 3 and Tailwind CSS**, delivering fully responsive layouts across mobile, tablet and desktop.
- Developed an admin dashboard for **Med24** with its backend API and database, streamlining operations for a medical services provider.
- Shipped medical-sector websites on **WordPress/PHP** with a focus on clear information architecture and accessible, functional interfaces.

Fullstack Developer — DataSite Technology

Jan 2021 – May 2021

- Developed and supported client-side web applications and **PHP/MySQL** server-side logic against technical specifications, contributed to server maintenance, and carried out ongoing refactoring of existing code.

PROJECTS & OPEN SOURCE

[Expensify / App — open-source contributor](#) · TypeScript, React Native

- Contribute to a large-scale open-source financial collaboration product, working within an established review process on a codebase maintained by a distributed team. Earned GitHub **Pull Shark** and **Pair Extraordinaire** achievements.

[Personal Portfolio](#) · TypeScript — designed, built and deployed via GitHub Pages

SKILLS

Languages: **JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS/SCSS**

Frameworks: **React, Vue 2 / Vue 3, Nuxt 3, Ionic**

State & Data: **React Query, Redux Toolkit, Vuex, Pinia, REST APIs**

Backend, DevOps & AI: **Python, PHP, Node.js, Java, SQL, MySQL, PostgreSQL, Docker, AI engineering**

UI & Styling: **Tailwind CSS, Radix UI, Bootstrap-Vue, responsive & accessible design**

Architecture & Tooling: **Component-driven design, design systems, SOLID, Git/GitLab, Vite, Webpack, CI/CD, AI-assisted development**

Domains: **ELD & telematics, CRM, WMS/TMS, admin dashboards, e-commerce**

EDUCATION & LANGUAGES

Tashkent State Household College — Vocational Secondary Education

2019

Languages: Uzbek (native) · English (B1) · Russian (B1)
